## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a tetraalkylphosphonium salt, classified in class 987, subclass 110.
- II. Claims 12-20, drawn to an organically modified layered silicate and compositions thereof, classified in class 556, subclass 173.

The inventions are distinct, each from the other because:

Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product, and the species are patentably distinct (MPEP § 806.05(j)). In the instant case, the intermediate product is deemed to be useful as an independent additive in a composition and the inventions are deemed patentably distinct because there is nothing on this record to show them to be obvious variants. The tetraalkylphosphonium salt is transformed upon being intercalated in a layered silicate due to ion exchange. Note that the claims drawn to compositions containing the organically modified layered silicate (claims 19 and 20) have been grouped with the layered silicate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1714

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
